OpenBudgets.eu

OpenBudgets is an open-source software framework and accompanying Software-As-A-Service (SAAS) platform that allows users to easily upload, export, analyse and visualize budget and transaction data.

<http://openbudgets.eu>

UPLOAD, VISUALIZE, ANALYSE PUBLIC
BUDGET AND SPENDING DATA. START
EXPLORING AND LEARN STORIES BEHIND
BUDGETS.

Objectives

OpenBudgets.eu promotes transparency and accountability in the domain of public spending. We work towards opening more public budget and spending data in Europe.

With increasing amounts of budget and pending data becoming available, the problem of different accounting models and data standards is also increasing. OpenBudgets.eu aims to solve this issue by developing a platform that will be easy-to-use, flexible, and capable of interpreting previously incompatible types of budget and spending data.

We gather data and develop tools together with journalists, civil society organizations, non-governmental organizations, parliamentarians and public officials. The platform's users will be able to easily upload, visualise, and analyse public budget and spending data to explore and learn stories behind it.

The core objectives of OpenBudgets are:

A semantic data model that can integrate heterogeneous budget data, thereby enabling the discovery of anomalies through comparison and analysis.

A library of visualisation tools
Libraries of visualisation, data-mining, and comparative analysis tools that enable stakeholders such as journalists and activists to draw stories from datasets.

A feedback and citizen engagement interface that acts as a bidirectional channel between users and producers of budget data.

Engaging User Groups: The continuous engagement and involvement of user groups (journalists, civil society organisations, citizens, policy makers) through workshops and tailor-made tools ensures the alignment of the platform's features with the user's requirements.

Outcomes

Data Model and Code List for Budget and Spending Data

Budget and Spending Data Collection and Data Mining

New Budget and Spending Data Visualisations

OpenBudgets Platform

Tools and Training for Journalists

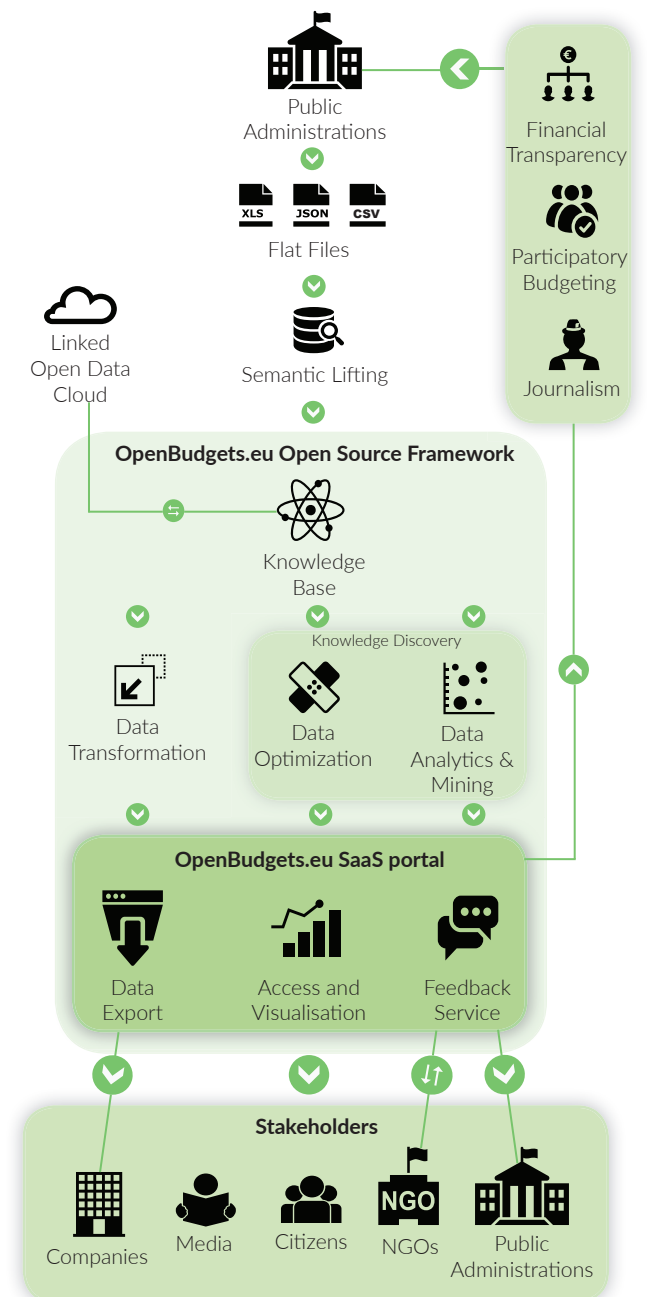

Advocacy of Open Budget Data

Feedback Tools for Participatory Budgeting

Technical Structure
