

OpenBudgets.eu: Fighting Corruption with Fiscal Transparency

Project Number: 645833

Start Date of Project: 01.05.2015

Duration: 30 months

Deliverable 3.1

Visualisations Collection (existing and ideas)

Dissemination Level	Public
Due Date of Deliverable	Month 4, 31.08.2015
Actual Submission Date	02.10.2015
Work Package	WP 3, Budget and Spending Data Visualisation and Exploration
Task	T 3.1
Type	Report
Approval Status	Final
Version	1.0
Number of Pages	87
Filename	D3.1 Visualisation Collection.docx

Abstract: A detailed report containing the classification and the description of the collected budget & spending visualisations

Executive Summary

This document presents the research undertaken in order to collect and categorize different types of possible visualisations experimented to represent budget data in different contexts and projects.

This deliverable is part of the Work Package 3 whose main objective is to provide a human friendly interface of spending and budget data.

The outcome of this specific deliverable would be to analyse and reuse the best practices of some given data visualisations from the collection be used in the future software. This deliverable will also be further enriched through visualisation hackathons that will be held every couple of months.

Section A contains a selection of data visualisations about public finances from journalists and media organisations, civil society organisations and advocacy groups, public institutions and companies. These 76 examples were chosen from a bigger corpus of 233 fiscal data visualisation projects derived from a combination of mapping research, triangulating existing sources and lists and soliciting for additional cases from expert communities.

Section B describes in more details the methodology behind the process of organizing hackathons and collecting visualisations out of a hackathon, directly from engaged citizens.

Section C provides a proposal to create a website in order to promote all hackathons intended to take place under the project and in Appendix I, a report of the Hackathon organized by OpenKnowledge Greece in Thessaloniki on the 17th and 18th of June 2015.

Table of Contents

1	SECTION A: VISUALISATIONS COLLECTION	12
1.1	DATA VISUALISATIONS ON PUBLIC FINANCE, EXAMPLES FROM JOURNALISM, ADVOCACY AND INSTITUTIONS	12
1.1.1	Consultancy	12
1.1.2	Introduction	12
1.1.3	Building the Collection	12
1.2	RESULTS	13
1.2.1	Showing breakdown of totals	13
1.2.1.1	Death and Taxes (United States)	13
1.2.1.2	Bubble Tree – Where Does My Money Go? (UK)	14
1.2.1.3	Tree Map – Open Spending (International)	14
1.2.1.4	The Guardian: “Government spending by department, 2010-11: get the data” (UK)	15
1.2.1.5	Bubbles – City of Bern 2012 Budget (Switzerland)	15
1.2.1.6	OpenData.ch: Kanton Bern (Switzerland)	16
1.2.1.7	Tree Map – Government Interrogating Spending Tool (UK)	16
1.2.1.8	Tree Map: The Guardian: “BBC spending: where does the licence fee go?” (UK)	17
1.2.2	Contextualising big numbers	18
1.2.2.1	XKCD: Money (International)	18
1.2.2.2	Tree Map – The Billion Dollar-o-Gram 2013 (International)	19
1.2.2.3	Tree Map: The Guardian/Information is Beautiful: The Billion Pound-O-Gram (UK)	20
1.2.2.4	Information is Beautiful: Debtris US (United States)	20
1.2.2.5	Spending Stories (International)	21
1.2.3	Showing geographical distribution of funds	21
1.2.3.1	Map Bubbles: Al Jazeera – “China’s African spending spree” (Africa)	21
1.2.3.2	Map Bubbles: Mapa Social (Brazil)	22
1.2.3.3	Map Bubbles: United Nations Development Programme (International)	22
1.2.3.4	Map Bubbles: City of Boston’s Open Budget Application (United States)	23

1 Section A: Visualisations Collection

1.1 Data Visualisations on Public Finance, Examples from Journalism, Advocacy and Institutions

1.1.1 Consultancy

Open Knowledge compiled through the help of the community a collection of references looking at how different kinds of visualisations and visual elements are used to narrate public finances - whether by journalists, civil society organisations or public sector bodies.

The list can be founded at <https://discuss.okfn.org/t/good-examples-of-fiscal-data-visualisation/426>.

1.1.2 Introduction

This report contains a selection of data visualisations about public finances from journalists and media organisations, civil society organisations and advocacy groups, public institutions and companies. We have selected 76 examples to illustrate 10 different functions, namely:

1. Showing breakdown of totals
2. Contextualising big numbers
3. Showing geographical distribution of funds
4. Showing trends over time
5. Showing breakdown of funds by sector or recipient
6. Showing networks of financial flows
7. Following financial flows
8. Comparing budgeting, commitment and execution
9. Comparison of revenues, expenditures and debts
10. Public finances per person

These 76 examples were chosen from a bigger corpus of **233 fiscal data visualisation projects** derived from a combination of mapping research, triangulating existing sources and lists and soliciting for additional cases from expert communities.¹

1.1.3 Building the Collection

In order to build the collection we started with a collection of projects derived from another study we conducted in order to map “open budget data” on digital media.² In this study we found that over 65% of the 120 fiscal data projects we examined used visualisations to present information about public finances.³ We also incorporated examples from other lists, including relevant items from a database of 466 projects from The Guardian and the New York Times from between 2000 and 2015,⁴ as well as examples from expert data visualisation blogs (such as Infosthetics and Visual

1.2.3.6 Guardian: “Who donates aid - and who receives it?” (International)

Some of the biggest countries in the world receive the most aid. But look at the figures as a percentage of the country's gross national income and you get a different picture

● Aid received as % of gross national income, 2007 ● Aid received in 2007, \$bn

Aid: the biggest donors

The US leads the pack, donating the most money. But if you look at the figures as a percentage of gross national income, it becomes the least generous

1.2.4.3 New York Times: “Four Ways to Slice Obama’s 2013 Budget Proposal” (United States)

All Spending | Types of Spending | **Changes** | Department Totals

Changes to Discretionary Spending

Discretionary spending is controlled by the annual budget process. The White House and Congress agreed to a cap in spending in August, so proposed increases in categories like education and energy require cuts in other areas.

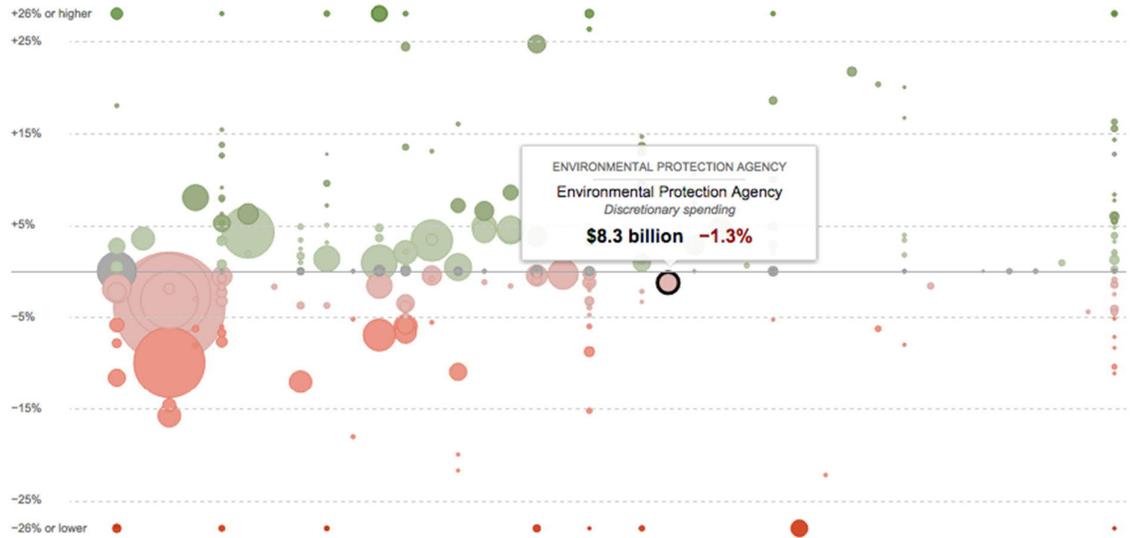

Chart shows \$3.7 trillion authorized to be spent in 2013. (Total spending is estimated to be \$3.8 trillion, including funds authorized in other years). Negative budget authority, which results from fees or other collections, is shown only on the department totals tab, but is included in other totals.

2 Section B: Getting Users’ Feedback Through Hackathons

2.1 Methodology

In Wikipedia Hackathons are defined as events in which computer programmers and others involved in software development and hardware development, including graphic designers, interface designers and project managers, collaborate intensively on software projects.[1] Hackathons have become a major part of the modern tech world, providing developers with a place and time to work on projects. Lately, hackathons are becoming even more popular since they are organised also in different contexts than IT. All hackathons have the same conceptual framework which is to invite a large number of individuals to identify possible solutions in a well-defined issue/project providing them the necessary space and tools.

Understanding the importance and capabilities of crowd to enhance the efforts of the consortium partners searching and collecting various budget and spending visualisation use-cases that can be found online in the context of the project openbudgets.eu hackathons are organised to gather feedback and improve the OpenBudgets.eu repository’s features and usability.

OK Greece has organized the first hackathon during 17-18 June 2015 in Thessaloniki. This hackathon has been organised upon the methodology proposed on The Open Data Hackathon How to Guide by Kevin McArthur, Herb Lainchbury and Donna Horn.

The guide describes in detail three main stages:

Figure 77 - Main stages for implementing a hackathon

2.2 Preparation

The first set of actions that have been performed are related to the preparation stage of the hackathon. Preparation stage include the following tasks:

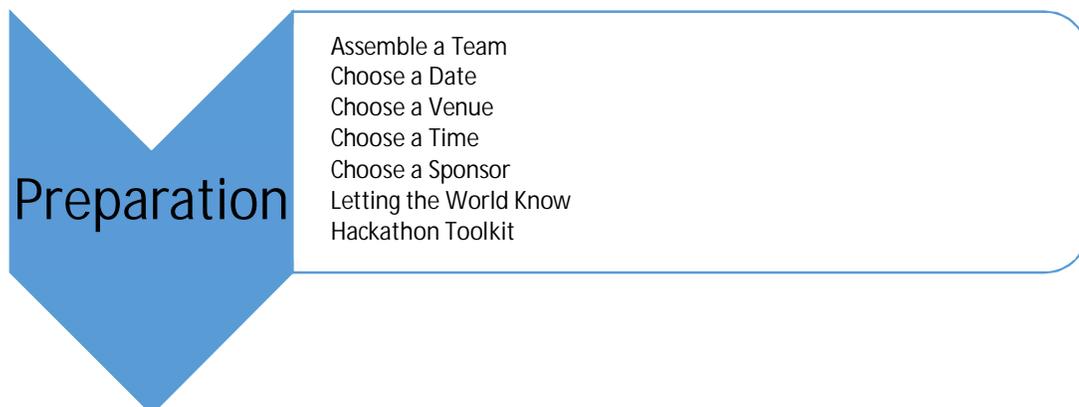

Figure 78 - Tasks to be implemented during the preparation

The team that supported the implementation of the hackathon included experts actively involved in the OpenBudgets.eu project; volunteers that support the activities of OK Greece and students from the Aristotle University of Thessaloniki.

As it is mentioned in the guide choosing the date of the hackathon is one of the most important tasks for the success of it. OK Greece is in very strong collaboration with different Schools and departments of Aristotle University of Thessaloniki. Between the 17th and 18th of June 2015 two major training events were taking place in Aristotle University attracting a very large number of external participants.

The first has been the “FOSTER – School of data” organised under the EU funded project FOSTER, by OK Greece in collaboration with the School of Journalism and Mass Communications (<http://www.jour.auth.gr/en/>) of the Aristotle University of Thessaloniki. The project "FACILITATE OPEN SCIENCE TRAINING FOR EUROPEAN RESEARCH - FOSTER" is a two year project aiming to set in place sustainable mechanisms for EU researchers to FOSTER OPEN SCIENCE in their daily workflow, thus supporting researchers optimizing their research visibility and impact, the adoption of EU open access policies in line with the EU objectives on Responsible Research & Innovation. Open Access and Open Science principles are an essential part of knowledge creation and sharing. They directly support the researchers need for greater impact, optimum dissemination of research, while also enabling the engagement of citizen scientists and society at large on societal challenges.

FOSTER provides financial support for different types of training events and strategies, ranging from short (one or two-hour) workshops to multiple day workshops, from face-to-face training to e-learning sessions. FOSTER also provides assistance in shaping the training programme, selecting training materials and recommending speakers/trainers.

The second has been CAMEI summer school which aimed to train the trainers and the healthcare workforce on new and open technologies enhancing the provision of IT skills to healthcare workforce, by means of sharing, reuse, repurposing and creation of open educational material applied in different contexts. The summer school focused to encourage participants to better appreciate the critical role of Open Education and technologies in providing opportunities for health education and the potential of these opportunities for both learners and educators. The summer school provided a stimulating atmosphere enforced by interactive sessions co-ordinated by well-known experts and an enthusiastic international technical team that guided participants during the hands-on sessions, so that they maximise their technical skills and competencies, increase their knowledge base, receive expert advice and collaborate and share with others contemporary medical education resources/material by means of open educational repositories.

OK Greece had the opportunity to incorporate the hackathon in the program of the above 2 day training event. The hackathon has been organised on 18th of June 2015 at 11:45 as one of the parallel sessions of the training event (see agenda in Figure 82). This concluded to be a very successful decision and action for a number of reasons such as: the visibility of the hackathon through the promotion of the event in the OK Greece website at <http://foster.okfn.gr/>, the attraction of attendees from the audience of both FOSTER and CAMEI events.

The training venue has been the KEDEA Conference Centre (Aristotle University’s Research Dissemination Center). Aristotle University’s Research Dissemination Center (KEDEA) founded in 2006 and opened its doors for the first time in April 2011. The Conference Center has three ultra-modern auditoriums, exhibition space of 300 sq.m. and public spaces ideal for hosting scientific conferences, symposiums and cultural events. The Conference halls are available, upon request, to departments and faculties of Aristotle University, as well as to third parties such as Associations, Organizations and individuals.

The III AMPHITHEATRE is located in Basement (-1) of KEDEA Conference Centre and has a capacity of 125 seats. The amphitheatre has the following facilities:

- (1) sound installation
- (2) Microphones for the audience
- (3) Microphone Installation (Three fixed microphones at the presidium and a lectern to the speaker)
- (4) Video projector
- (5) Projection Screen (3 meters width 4: 3)
- (6) Ergonomic seats with folding lectern
- (7) air conditioning
- (8) Wi-Fi
- (9) Broadcast Video - Audio (Streaming)

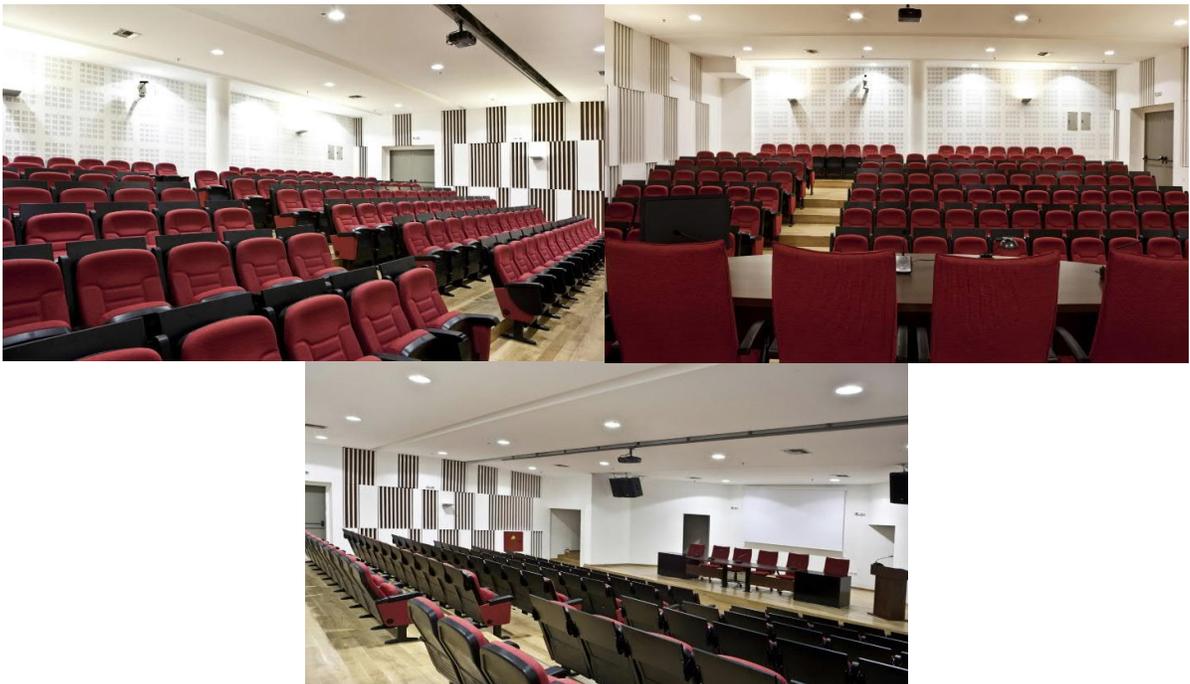

Figure 79 - KEDEA Amphitheatre III Photos

Figure 80 - KEDEA Basement Lobby – where the hackathon took place

To promote the hackathon effectively to get the mix of attendees that was required, OK Greece implemented a website to promote FOSTER and the hackathon. The URL of the website is <http://foster.okfn.gr>

Tools that haven been used to promote the hackathon, have been:

- Twitter – Using the @okfngr twitter account the world has been informed about the event.
- Facebook - The account <https://www.facebook.com/okfngreece> have been also used to promote the event.
- Blogs – OK Greece posted key info about the event in its main website. The post can be found on <http://okfn.gr/2015/06/summer-school-of-data/>. In the post briefly key information about the event has been provided so it can be read quickly and easily. A link to registration and FOSTER site was also included.
- Different mailing lists have been used. The total number of
- Except the “FOSTER” website that hackathon has been also presented in the website of Aristotle University of Thessaloniki <https://www.auth.gr/news/conferences/18567> .

17 - 18 Jun 2015
Thessaloniki - Greece

Discovering Open Science + Open Opportunities

Who we are

Open Knowledge Foundation Greece is a non-governmental organization that pursues openness and public information freedom in Greece, through participation and transparency activities. It has been established by a group of teachers, developers, hackers, citizens' and State representatives and it is supported by a national network of volunteers most of which are experienced professionals in the fields of Computer Science, Mathematics, Medicine, Journalism etc. and has been formally appointed as the Greek Chapter of the Open Knowledge Foundation.

**OPEN
KNOWLEDGE
GREECE**

What we do

Members of the local chapter had previously created the first Greek Linked Open Data Cloud consisting mainly of government data nodes (Clarity programme, criminality data, wildfires data). OKFN Greece members have undertaken the Greek DBpedia realization, creating the Internationalized Extraction Framework, which further led to the establishment of the DBpedia Internationalization Committee. OKFN Greece has also led the **Open Data Activities** in Greece and has built the Greek Open Data Hub, a central repository of the Greek open datasets.

About

The event will be implemented in a 2-day training event in 17-18 June 2015 in Thessaloniki, Greece.

Figure 82 - FOSTER website Agenda of the session that Hackathon took place

The screenshot shows the registration form for the FOSTER School of Data event. At the top, there is a banner for the event: "FOSTER SCHOOL OF DATA 17 - 18 Jun 2015 Thessaloniki - Greece". Below the banner, the registration process is shown in a multi-step format: "Start", "Preview", and "Complete".

The form is divided into several sections:

- Personal Details:** Includes fields for Title, First Name, Last Name, and Affiliation.
- Address:** Includes fields for City, ZIP Code, and Country.
- Contact Details:** Includes fields for Email, Phone, and Fax.
- Background Info:** Includes a question "I have worked previously with open data" with radio buttons for Yes and No. Below this are checkboxes for various backgrounds: Health professionals, Journalist, Librarian, Developer, and others.
- Choose Hand-On Sessions:** A list of sessions with checkboxes. Two sessions are highlighted with a red box and labeled "Hackathon":
 - Data Journalism - Stories from Data
 - Data Journalism - Visualizations
- Date:** A date selection field.

At the bottom of the form, there is a "Privacy" button and a note: "Registration is free of charge. You may choose as many sessions as you like. Participants should bring their own laptops."

Figure 83 - FOSTER website registration form with the two sessions related to the hackathon

2.2.1 The Hackathon Day

The hackathon started with an introduction to Openbudgets.eu project, description of the framework and the scope of the hackathon. Mr. Cedric Lombion, Community Manager for School of Data, representing Open Knowledge Foundation International presented to the attendees the initiative “School of Data” and how hackathons have a major role in the activities of the School of Data. Mrs. Anne Lise Bouyer, from Journalism ++ presented “How to get stories form data”. Anne-Lise Bouyer is the project manager and the COO of Journalism++, an agency for data-driven stories.

Figure 85 - Mentoring the teams during the hackathon

Figure 86 - Participants in the auditorium

Figure 87 - Hackathon team working on its story / case /visualisation + Mentoring

2.2.3 Results

More than 35 people attended the hackathon. They were divided in 7 groups of approximate 5 people each. Each group has been asked to come up with a case/story that would use open data to address any issue that they considered important. For each case they were asked to work on large piece of brainstorming paper, describe the datasets that they would use and propose different visualisation types.

OK Greece implemented a special online tool to assist the participants select and promote the stories/cases. Each group wrote a small descriptive paragraph about the case and the datasets and selected the related charts. After the submission of the

cases participants could vote for the story/case/visualisation they considered the most interesting.

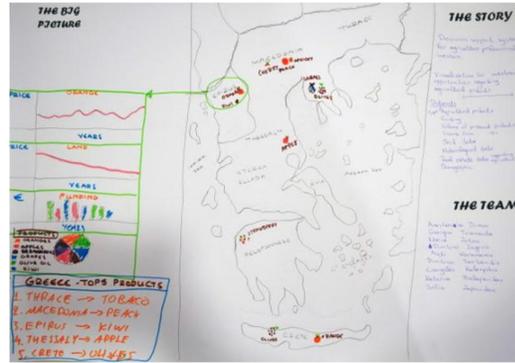

Stories	Users votes
Visualization opportunities regarding agricultural products	16
Arta Municipality Budget visualisation and public vote	13
How major spending's affect G.D.P	7
"War for education"	6
Are you among the green-conscious?	6
Military Transparency	7
The relationship of a country's education budget and spending. A Greek Example	4

The following table summarises the type of visualisations that have been used in the different cases. The visualization that was proposed in most of the cases has been “Bar chart”. Other chart types that have been proposed are pie charts, heat-maps, tree-maps and geo mapping.

Chart type	Proposed in x number of stories
Pie chart	3
Bar chart	5
Heat map	3
Tree map	3
Dendrogram	1
Time series	1
Line chart	1
Donut	1
Scatter	1
Mapping	2

2.2.3.1 Visualisation opportunities regarding agricultural products

The case / story proposes a decision support system for agriculture professionals / investors based on data of European funding, demographics, meteorological, volume of produced products, soil, real estate and income from produced products. A use case example is that a young farmer could ask for information about what type of agricultural products should he / she cultivate, in which Greek region and what kind of European funding is currently available.

Datasets: Agricultural products; Funding; Volume of products; Income from products; Soil data; Meteorological data; Real estate data; Demographics

Visualisation types:

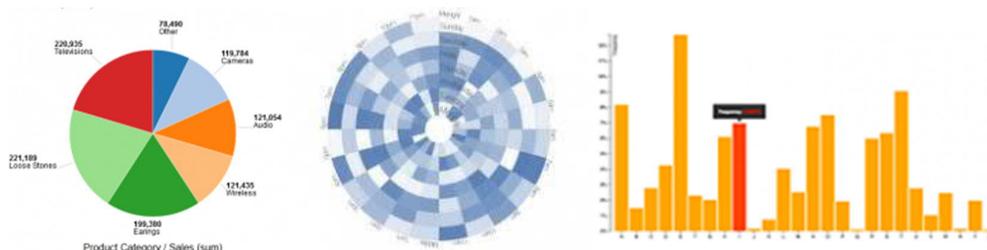

Figure 88 - Proposed visualisation types: pie chart, heatmap, bar chart

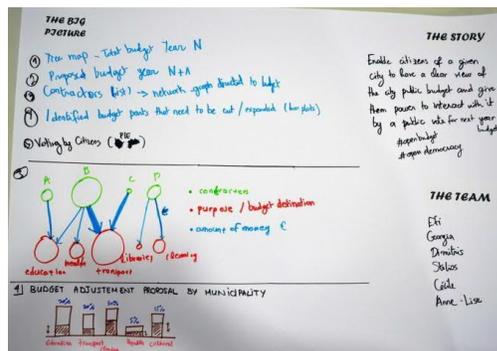

Contributors: Evangelos Kalampokis; Maria Zotou; Dimitrios Zegginis; Areti Karamanou; Georgia Tsiamanta; Anastasia Dimou; Sofia Zapounidou; Dimitrios Tsortanidis; Katerina Balapanidou.

2.2.3.2 Arta Municipality Budget visualisation and public vote

The story / case aims to enable citizens of the city of Arta to have a transparent view of their city budget for the current year, as well as for the previous year and give them power to interact with it through a public vote on a next year budget proposal.

On a central portal, citizens will be able to visualize different budget statements for year N and year N+1 and the municipality will propose specific public statements where it's possible to cut or expand.

Citizens would be able to vote for which kind of budget parts they will reduce or expand for next year public budget.

Visualisation types:

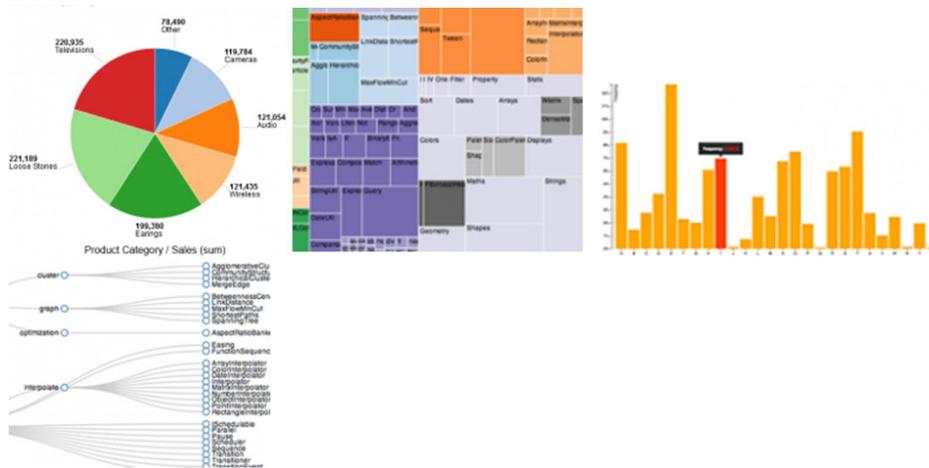

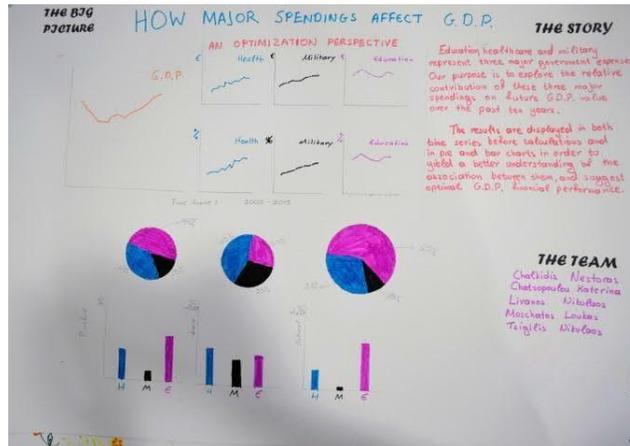

Figure 89 - Proposed visualisation types: pie chart, treemap, bar chart, dendrogram

Contributors: Efi; Georgia; Dimitris; Stelios; Cecile LE GUEN; Anne Lise BOUYER

2.2.3.3 How major spending’s affect G.D.P

Education, health care and military represent three major government category expenses. The case is to explore the relative contribution of these three major spending categories on future G.D.P's financial performance, over the past ten years.

The results are displayed in both time series before calculations and in pie and bar charts in order to yield a better understanding of association between them, and suggest optimal G.D.P financial performance.

Datasets: G.D.P longitudinal

Visualisation types:

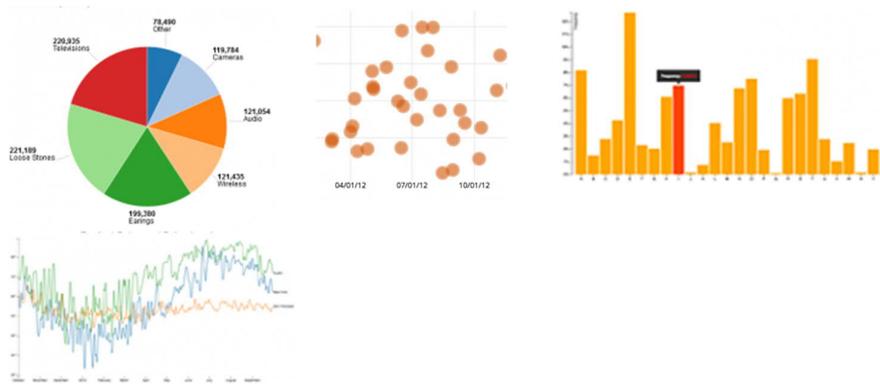

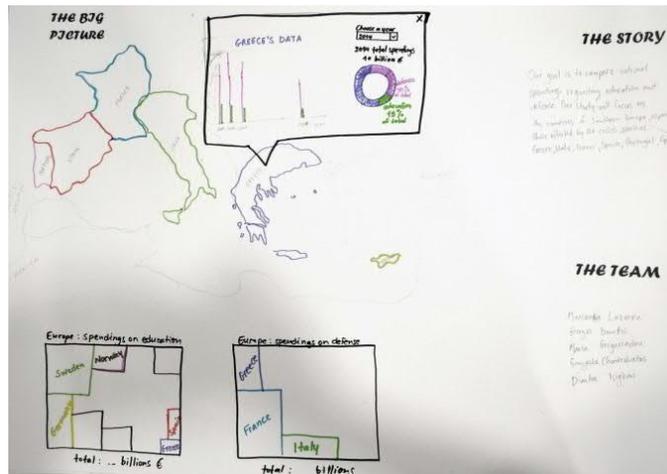

Figure 90 - proposed visualisation types: pie chart, time series, bar chart, line chart

Contributors: Chalkidis Nestoras; Moschatos Loukas; Chatzopoulou Katerina; Livanos Nikolaos; Tsigilis Nikolaos.

2.2.3.4 "War for education"

The aim of the case is to compare national spending regarding education and defence. The story focuses on the countries of southern Europe, especially those affected by the financial crisis, such as Greece, Italy, France, Spain, Portugal and Cyprus. It is aimed to investigate how the percentages for those two fields vary as the years go by.

Visualisation types:

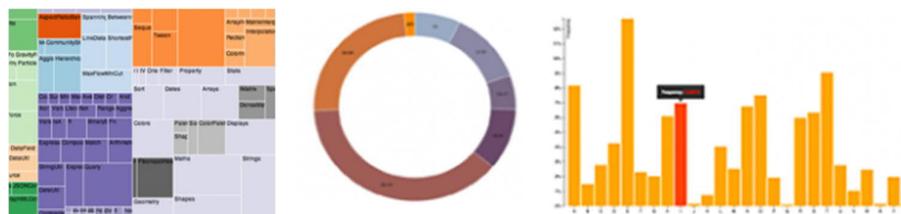

Figure 91 - Proposed visualisation types: treemap, donut, bar chart

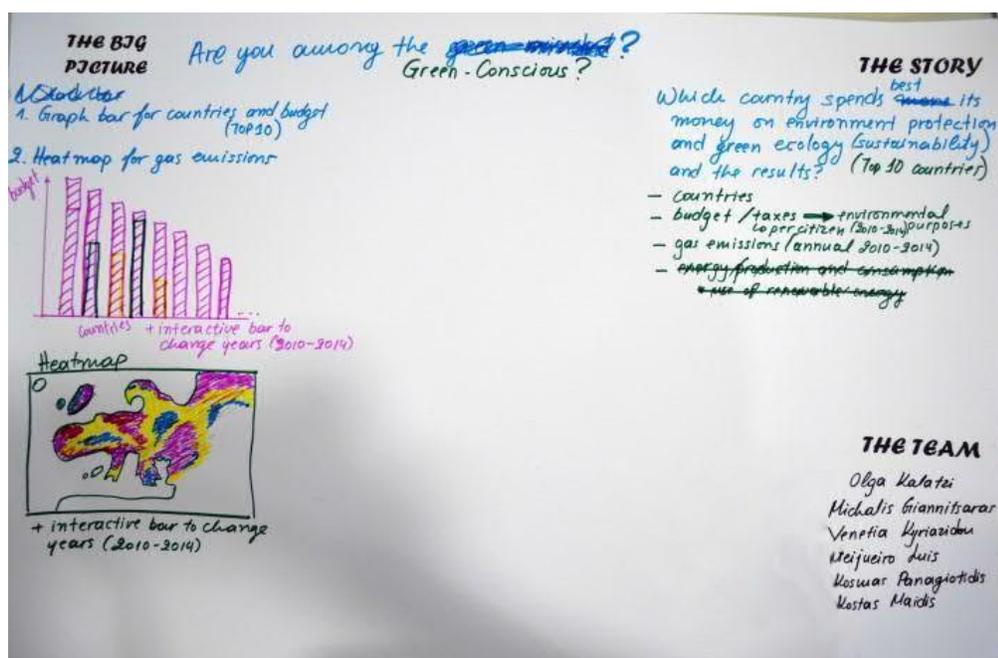

Contributors: Marianna Lazarou; Dimitra Tsigkari; Evangelos Chondrokostas; Giorgos Bountos; Grigoriadou Maria.

2.2.3.5 Are you among the green-conscious?

Which country spends most rationally and with the highest value added public money on environmental protection and green ecology (sustainability) and the results? (Top 10 countries)

The variables to be take account are: Countries; Budget/taxes per citizen for environmental purposes (annual data 2010-2014); and Gas emissions (annual data 2010-2014)

The case will investigate and attempt to answer the following questions: Which country spends more on environment solutions? What are the levels of gas emissions per country? Is there a relation between budget and emissions (Comparison of countries with best efficiency) And finally to compare the results in a 4-year timeline. (Trends and success rate).

Datasets: <http://ec.europa.eu/eurostat/data/database>

Visualisation types:

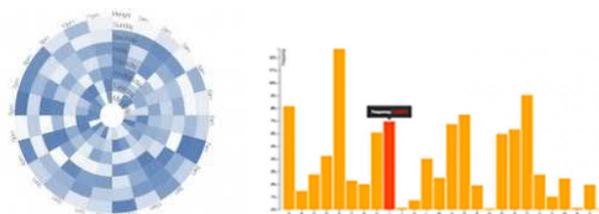

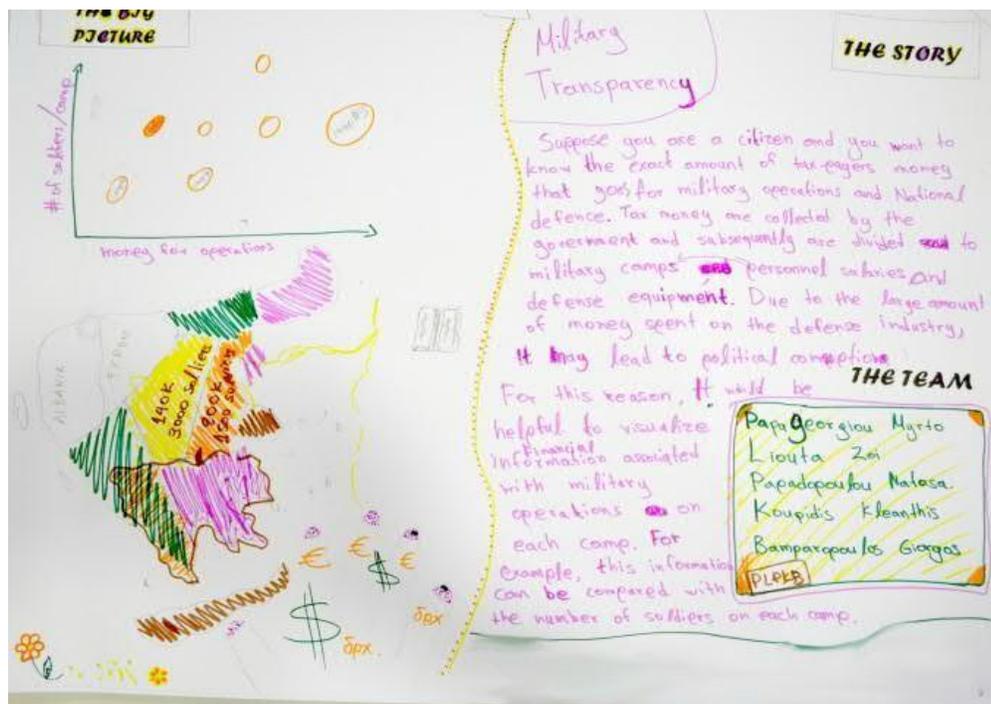

Figure 92 - proposed visualisations: heatmap, bar chart

2.2.3.6 Military Transparency

Suppose you are a citizen and you want to know the exact amount of tax-payers money that goes for military operations and national defence. Tax money are collected by the government and subsequently are divided to military camps, personnel salaries and defence equipment. Due to the large amount of money spent on the defence industry, it might lead to political corruption. For this reason, it would be helpful to visualize financial information associated with military

operations on each camp. For example, this information can be compared with the number of soldiers on each camp.

Datasets: Financial information; Capacity of military camps

Visualisation types:

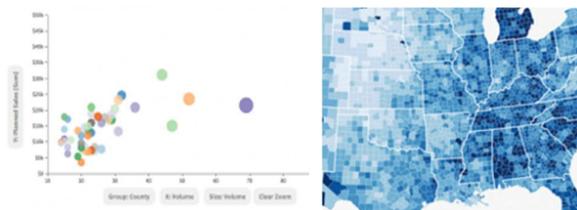

Figure 93 - proposed visualisation types: scatter, mapping

2.2.3.7 The relationship of a country's education budget and spending. A Greek Example

The case explores the relationship between a country's national budget which is dedicated to Education and spending. The information that will be utilised are from sources such as: (1) the national budget breakdown; (2) the most recent country census and what it reveals about higher education; (3) the budget breakdown of all higher education institutions in Greece and associated institutions that receive funding from these budgets.

The following visualisation tools are used in our exploration:

- A Geomap will visualise census data
- A tree map will visualise the universities budget breakdowns
- A Heat Map that shows the relationship between budget and real spending

Visualisation types:

Contributors:

Isidoros Passas; Androniki Sapountzil; Dimitrios Gkatzopoulos; Stylianos Hatzipanagos

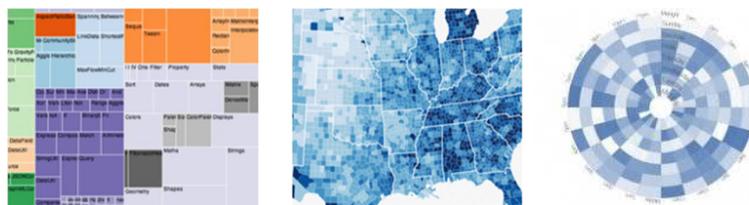

Figure 94 - proposed visualisation types: treemap, mapping, heatmap

Contributors: Isidoros Passas; Androniki Sapountzil; Dimitrios Gkatzopoulos; Stylianos Hatzipanagos.

3 Section C: Proposal for a Website to Promote All Hackathons

As it is described in previous sections of the deliverable, the hackathon's dissemination is eased through a website. It has been developed to promote the aims of the hackathon prior to the day the event is taking place, as well as, its results after its conclusion. The URL of the hackathons' website is: <http://hackbudgets.okfn.gr/>

As hackathons are foreseen to be organised regularly throughout the project duration, it is proposed to evolve this website so that all the hackathons that are foreseen can be included and promoted in a common way. This website may also be proved valuable for the presentation of the hackathons as well as for the continuous update of this deliverable (as described in the DoA) which could be used even after the ending of OpenBudgets.eu project to promote hackathons related to open budgets. In Appendix I the proposed structure and block diagram of the site are presented.

3.1 Version 1.0 17/09/2015

3.1.1 Home page

A website dedicated to hackathons to be organized may be proved quite helpful for the participants as well as for dissemination of the results. This website may complement the events section of the main project website, or be incorporated within it. In the currently available hackathons' website that has been created, there exist basic functions such as:

- (1) Each partner has a user account to describe and upload related material for the hackathon that they plan to organise.
- (2) After the end of each hackathon, their section will be categorised under the section "past hackathons" which can be edited again, while new photos, images and results can be uploaded.
- (3) A calendar of the hackathons exists, so that visitors know what happens where and when.
- (4) Any stakeholder, such as for example a municipality or a regional authority or other, might run their own hackathon. In order to perform their hackathon they may apply to the consortium partners a request for using the project datasets together with the data and structure of the website, as well as, the knowhow and expertise of openbudgets.eu.

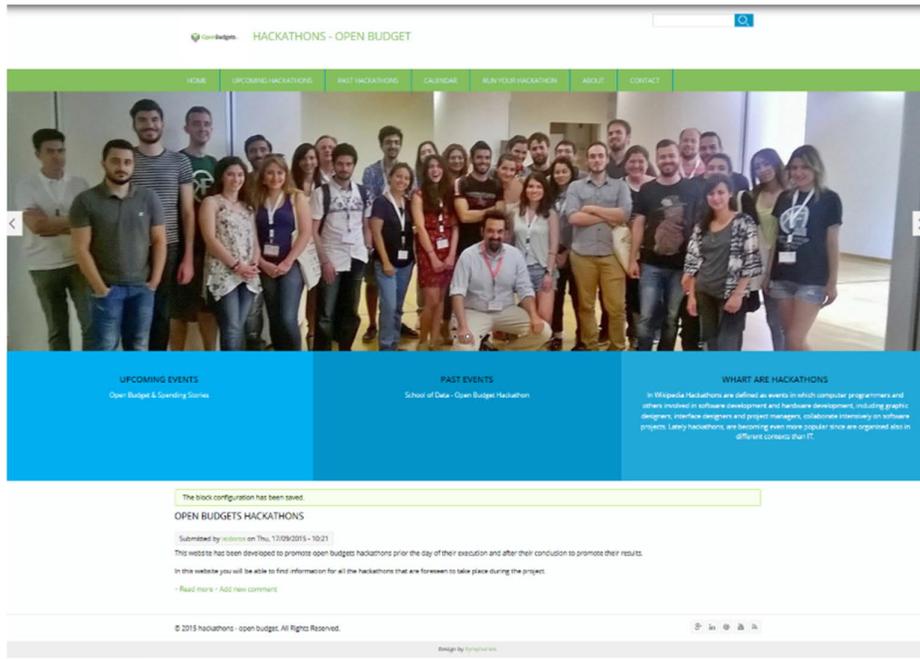

Figure 95 - developed website

The home-page contains a slideshow for the promotion of the upcoming hackathons and/or pictures of hackathons that have been completed. In addition there are three block areas. The first presents titles for quick access to the latest upcoming events and the second one to those that have been completed. The third block contains general information about hackathons.

3.1.2 Upcoming and past hackathons

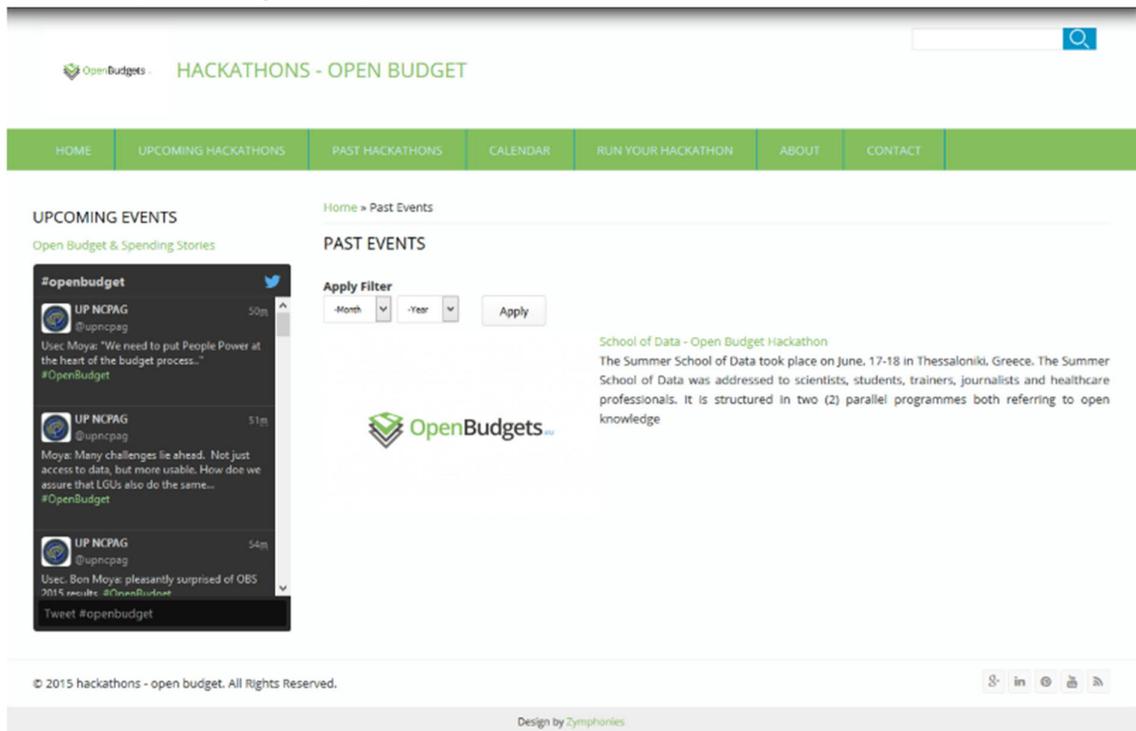

Figure 96 - past hackathons

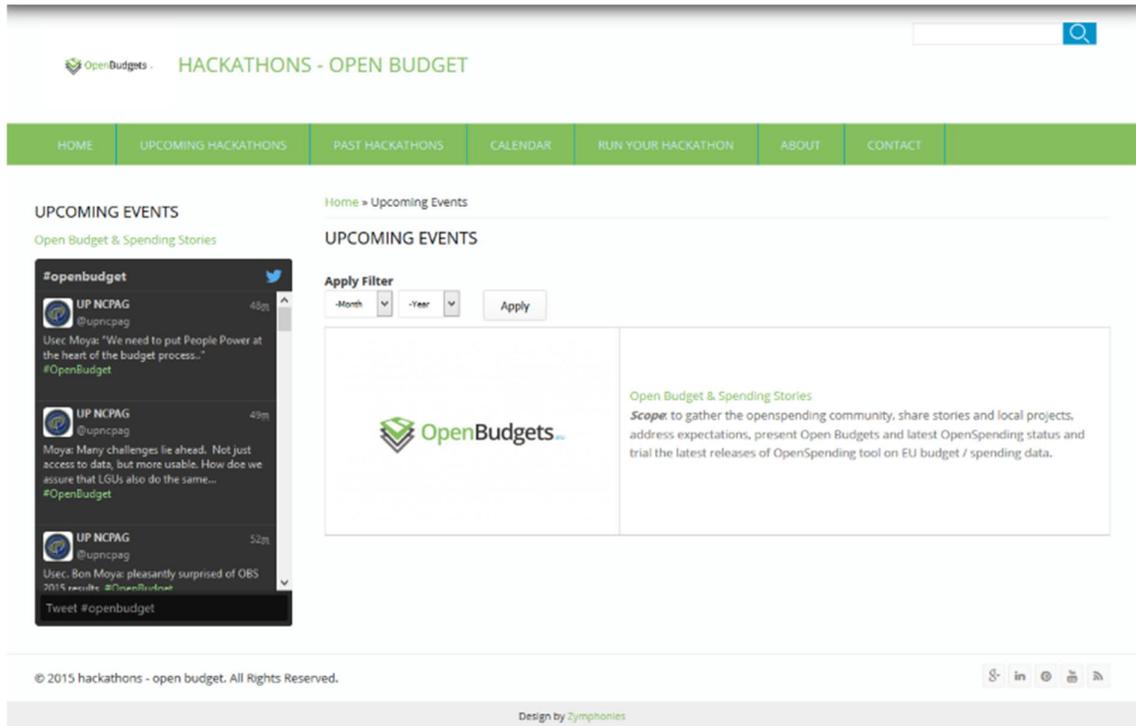

Figure 97 - upcoming hackathons

Upcoming and past hackathons are being displayed separately. Users can easily access the latest events and see a brief description of each one of them. A filter is added to help users search an event.

3.1.3 Calendar of hackathons

The screenshot shows the OpenBudgets website interface. At the top, there is a search bar and the text "HACKATHONS - OPEN BUDGET". Below this is a navigation menu with links for HOME, UPCOMING HACKATHONS, PAST HACKATHONS, CALENDAR, RUN YOUR HACKATHON, ABOUT, and CONTACT. The main content area is divided into two sections. On the left, under "UPCOMING EVENTS", there are three tweets from UP NCPAG (@upncpag) discussing budget processes and challenges. On the right, under "Home", there is a calendar for "JUNE 2015". The calendar is in a monthly view, showing days from 1 to 30. A purple event box is overlaid on the calendar, spanning from Wednesday, June 17, to Thursday, June 18, 2015. The event is titled "School of Data - Open Budget Hackathon". Below the calendar, there is a copyright notice: "© 2015 hackathons - open budget. All Rights Reserved." and social media icons for GitHub, LinkedIn, Facebook, and Twitter. At the bottom, it says "Design by Zymphonies".

Figure 98 - events in a calendar

Events are also being displayed in a calendar. The title of the event links to the description of it.

3.1.4 Run your hackathon

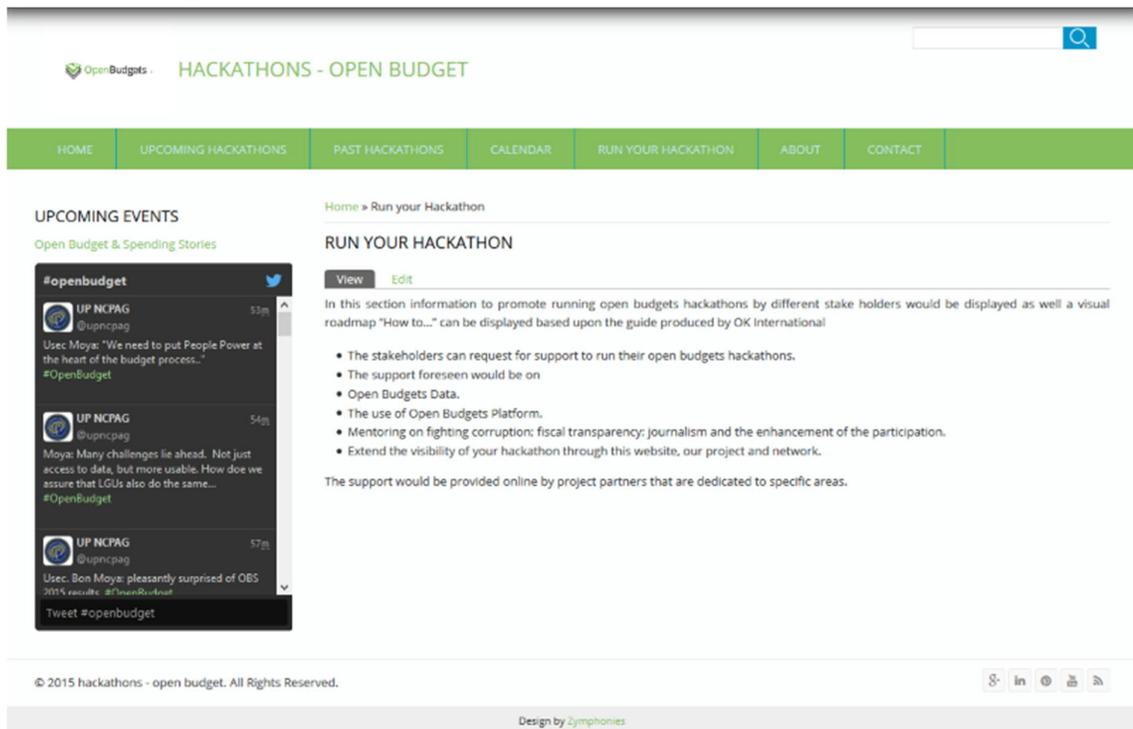

Figure 99 - promoting hackathons

A stakeholder, such as a municipality or a regional authority or other, might run its own hackathon. In order to perform their hackathon they may apply to the consortium partners to use the data and structure of the website and the knowhow and expertise of openbudgets.eu.

How to submit – post a hackathon

The following are the fields that are describing each hackathon. Each user should update the following fields. The fields with an asterisk are required.

Title *

Image : Files must be less than 12 MB. + Allowed file types: png gif jpg jpeg.

Body: WYSIWG editor or the user can witch to plain text editor

Event URL : Title + URL

Contact Details : Switch to plain text editor

Donors - Supporters : Title + URL

Dates 17/09/2015

Results : Results Title + Number of Participants + Key Outcomes

Links : Title + URL

Attachments: Files must be less than 12 MB + Allowed file types: pdf.

Image Collection: Add a new file + Files must be less than 12 MB + Allowed file types: png gif jpg jpeg.
